

TDMA Handling Guide- Bag Emptying- Bulk Bags

Employee Checklist

- Have you made sure the ventilation system is working properly? Make sure the dust extraction system is switched on and is working correctly before starting work.
- Have you checked if your dust control equipment is working properly? If you think there is a problem, ensure additional control measures are taken to reduce exposure to respirable crystalline silica dust while the problem persists.
- Have you checked if there are handling aids available to use while on shift?
- Have you cleared up any spills that occurred? Make sure to use vacuum or wet cleaning methods.
- When cleaning control rooms, are you using the correct vacuum wet cleaning techniques?
- Use, maintain and store any respiratory protective equipment provided in accordance with instructions.
- Check and implement the measures of controlling the risk of bacterial growth within water sources used across site, focusing most on systems where water droplets will be generated.
